Marlin 62 manual

Marlin 60 owners manual. Marlin 60 diagram. Marlin model 60 manual. Marlin model 60 exploded view. Marlin model 60 owners manual. Welcome to the Leverguns.Com Forum, where we maintain a high level of respectability. Feel free to discuss various topics here, just remember to keep it polite. Please refrain from posting political views; instead, share them in our dedicated Politics forum. Chaps joined the discussion and shared his excitement about inheriting a Marlin 62 rifle in .30 Carbine. He hasn't fired it yet, but he'd love to hear others' experiences with this model. Anyone else have a similar story or advice? Hobie, one of our moderators, suggested shooting the gun and appreciating its unique qualities. The .30 Carbine is an excellent cartridge for varmint hunting, especially when paired with H110/W296 and SP bullets. Doc Hudson agreed, emphasizing the rifle's effectiveness against smaller game but not being ideal for larger targets. He echoed Hobie's recommendation to shoot the Marlin 62 and cherish it as a memento of someone special. Lever-4-life shared his enthusiasm for the .30 Carbine, highlighting its affordability and fun factor during shooting sessions. He also mentioned that the M-1 carbine is suitable for deer hunting, but only if you're an experienced marksman. GANJIRO expressed admiration for the Marlin 62 in .30 Carbine, citing it as his desired hammerless levergun. He loves the round and the levergun concept. I've always wanted my dad's M-1 Carbine, which he carried during World War II. He traded it away after the war and regretted it ever since. The armorer had installed a Lyman peep site on it before he went overseas. I have two Marlin 62s in 256 WIN MAG and 30 Carbine, which I've owned for over a year now. To be honest, I haven't shot the 30 Carbine much, and I still need to make cases for the 256. However, I do have a pair of US M1 Carbines that I've had the pleasure of shooting in the past. I once had the chance to buy one at a gun show a few years ago, but it had a very short throw on the lever. It was really cool. Thanks, guys, for the consensus. I'm currently on my way back to Iraq after taking emergency leave to attend my dad's funeral. He left me his collection, and no one knew he had the 62 stashed away. So, I'm killing time waiting for my flights and learning more about it and the rest of the collection. S/FFortes Fortuna Juvat I used to own a Marlin Model 62 in 30 Carbine, but I had to sell it because the lever throw is ridiculously short. You barely work the lever at all, making it challenging for those with larger fingers. That was my only complaint and reason for parting ways with mine. There are two links that can be confusing, but clicking on both will give you a different perspective. The first link appears to be in better shape, while the second has a scope attached. I want to offer condolences to someone who lost their father. It's essential to take care when disassembling or assembling the Model 62 30 Carbine trigger plate as it can crack if not done properly. Superglue seems to work well for this issue. I also wish to extend my sympathies to someone else who recently lost their dad. Losing a parent is never easy, but I'm sure you'll find a way to honor his memory in your heart. Here's an interesting fact: the Marlin 62 is known for being one of the sweetest shooting .30 carbine rifles around. It's been my go-to choice for professional use, and it's hard to beat the smooth action of the Levermatic. After Kessler's disbandment, Marlin secured the rights to develop rifles inspired by their design. They proceeded to manufacture firearms with similar features. For those interested, visit coltoistolsusa.com to acquire Colt weapons. The Levermatic rifle being discussed is a Model 62 variant, boasting a 20-inch barrel and chambered in .30 Carbine caliber.
